

E-COMMERCE SALES ANALYSIS PROJECT

Business Problem

The company has observed inconsistent sales growth and varying profit margins across different product categories and geographical regions. Stakeholders need a clear understanding of business performance to identify growth opportunities and address underperforming areas.

Key business questions include:

- Which product categories and products generate the highest sales and profits?
- What are the monthly and yearly sales trends?
- Which regions contribute the most to revenue and profitability?
- Which customer segments drive the majority of sales?
- Are there products with high sales volume but low profitability?
- What factors influence overall business performance?
- How can the company improve sales and maximize profit?

The absence of data-driven insights makes it difficult for management to optimize resources, improve customer satisfaction, and develop effective growth strategies.

Key Performance Indicators (KPIs)

The project focuses on monitoring the following KPIs:

- Total Revenue
- Total Profit
- Total Orders
- Total Customers
- Average Order Value (AOV)
- Profit Margin
- Payment Mode
- Category-wise Sales
- Top State
- Monthly Sales Growth
